1.2. Data to API Pivoting US

1.3. Business Understanding 6 / 8

- 1.3.1 Video - Data Analytics for Business Insights
- 1.3.2 Practice Item - Data Analytics for Business Insights
- 1.3.3 Video - Humanitarian Insights from Data Analytics
- 1.3.4 Social Examples
- 1.3.5 Practice Item - Social Examples
- 1.3.6 Environmental Example - Climate Change
- 1.3.7 Practice Item - Environmental Example - Climate Change
- 1.3.8 Lab - Pivot Charts**

1.4. Experience Analytics Summary 0 / 3

Module 2: Data Collection and Storage

Module 3: Artificial Intelligence and Machine Learning

1.3.8 Lab - Pivot Charts

Part 1. Visualizing Data Pivoting

Intro Exercises 100%

You Completed Part 1

Great Work!

Download Exercises as Web Page

pivot_clothing					
Item	type	color	size		
1	pants	red	L		
2	shirt	green	L		
3	sock	red	L		
4	pants	green	S		
5	sock	blue	S		
6	shirt	blue	S		
7	sock	red	L		

Learnings:

I've learned how to organize the data visually by the use of pivot to move the items in their right color and move them separately to get the highest quantity of items in the dataset. I've learned how to create pivot charts too by using the items dataset and dragging it to the values drop zone which counts the number of items of each item in a pivot chart. Lastly, I've learned to use the value drop zone for the color which counts the total number of items for each color.

PART 2

Learnings:

Now it has a different kind of approach because it has 4 data tables (countries, moons, animal_sleep, and longest_rivers). First, you must select the moons data table at the Table tab, drag the Planet dataset for the columns section for the labels that are needed for the number of moons for each planet and Moon dataset for the Values Drop Zone for the count value that counts the number of moons for each planet which shows the chart itself. Second, is the same as the first one but drag the Radius dataset in the Values Drop Zone and put avg on it to get the average radius of the moons in each planet. Third, I go back to the countries data table in which I drag the Continent dataset on the Columns and Area dataset in the Values with the Avg mode to display the average country area for each continent. Fourth, is the same as the third one but I drag the population dataset from the Values Drop Zone which I use the Sum mode to display the total population for each continent. Fifth, I go to the animal_sheep table where I drag the Diet dataset from the columns and hours_sleep dataset from the Values drop zone which uses the Avg mode for the average hours of sleep for animals based on their diet. Sixth, I go to the longest_rivers which I use the Outflow to the Columns Section for the most common type of Outflow. Seventh and Last One, is the same Column which is the Outflow Dataset but I've used the Length Dataset which has Avg mode for it to show the average length for the rivers of each outflow type. Pivoting is like a pole vault because you need to jump to another data table for it to get the graph for the datasets given.

2. ANSWERS TO SUPPLEMENTAL ACTIVITY

Part 3

xid	day	flavor	cone	scoops	age	rating
107	F	chocolate	Y	3	teen	5
108	S	strawberry	Y	2	child	5
109	S	vanilla	N	1	senior	5
110	S	strawberry	N	1	senior	5
111	S	chocolate	N	1	teen	4
112	S	vanilla	Y	3	teen	4
113	S	chocolate	Y	2	teen	3
114	S	espresso	N	1	senior	4
115	S	strawberry	N	1	senior	4
116	S	chocolate	N	2	child	5
117	S	rainbow	N	1	senior	5
118	S	strawberry	Y	3	teen	4
119	S	rainbow	Y	2	child	5
120	S	chocolate	Y	3	child	5
121	S	vanilla	N	2	adult	3
122	S	rainbow	Y	1	child	5
123	S	rainbow	Y	2	child	5
124	S	strawberry	Y	1	child	5
125	S	rainbow	Y	1	child	5
126	S	strawberry	Y	1	child	5
127	S	espresso	N	2	teen	5

Learnings:

Now there is an xid column which is a transaction number, there are hundreds of data values, Age is a category, Day column has the day of the week abbreviations (M, T, W, TH, F, S, SU) , and ratings go from 1 to 5. I've learned how to break down the pivot chart because it now has a Rows Drop Zone like it has an example which I used for the age field which shows the average rating for each flavor in each age category. Based on my analysis, the ice cream shop needs to have a flavor that will suit all of the Child, Teen, and Senior Customers for the revenue to get higher.

3. ARTIFICIAL INTELLIGENCE (AI) USE DISCLOSURE STATEMENT

I hereby declare that artificial intelligence (AI) tools were used, if applicable, in the preparation of this academic work. The following indicates the nature and extent of AI assistance:

Tools Used: _____

Examples: ChatGPT, Microsoft Copilot, Grammarly, QuillBot, etc.

Purpose of Use: _____

Examples: grammar correction, idea generation, formatting, summarization, code assistance, explanation of concepts, etc.

Extent of Use: _____

Explain how AI was used and confirm that it did not replace original thinking, analysis, authorship, or completion of the required work.

By submitting this activity, I affirm that my use of AI complies with T.I.P.'s AI usage policy and does not exceed the permitted limits for similarity, automated content generation, or academic assistance.

I understand that any false, incomplete, or misleading disclosure may be subject to investigation in accordance with due process and may result in sanctions for violation of existing T.I.P. policies.

Lab activities, templates, and related instructional materials shall not be reuploaded, reproduced, distributed, or shared with external organizations or third parties without the prior express written permission of the Technological Institute of the Philippines.

Please have the honor of pledge in the comment section or at the bottom of your activity document/exam or any form of file submission.

I affirm that I will not give or receive any unauthorized help on this activity/exam and that all work will be my own.
